

**MICRORISC<sup>®</sup>** Technical concept

Dr. Vladimír Šulc, CEO, MICRORISC s.r.o.

Technical concept

*Short recap*

  
Smarter Wireless. Simply.

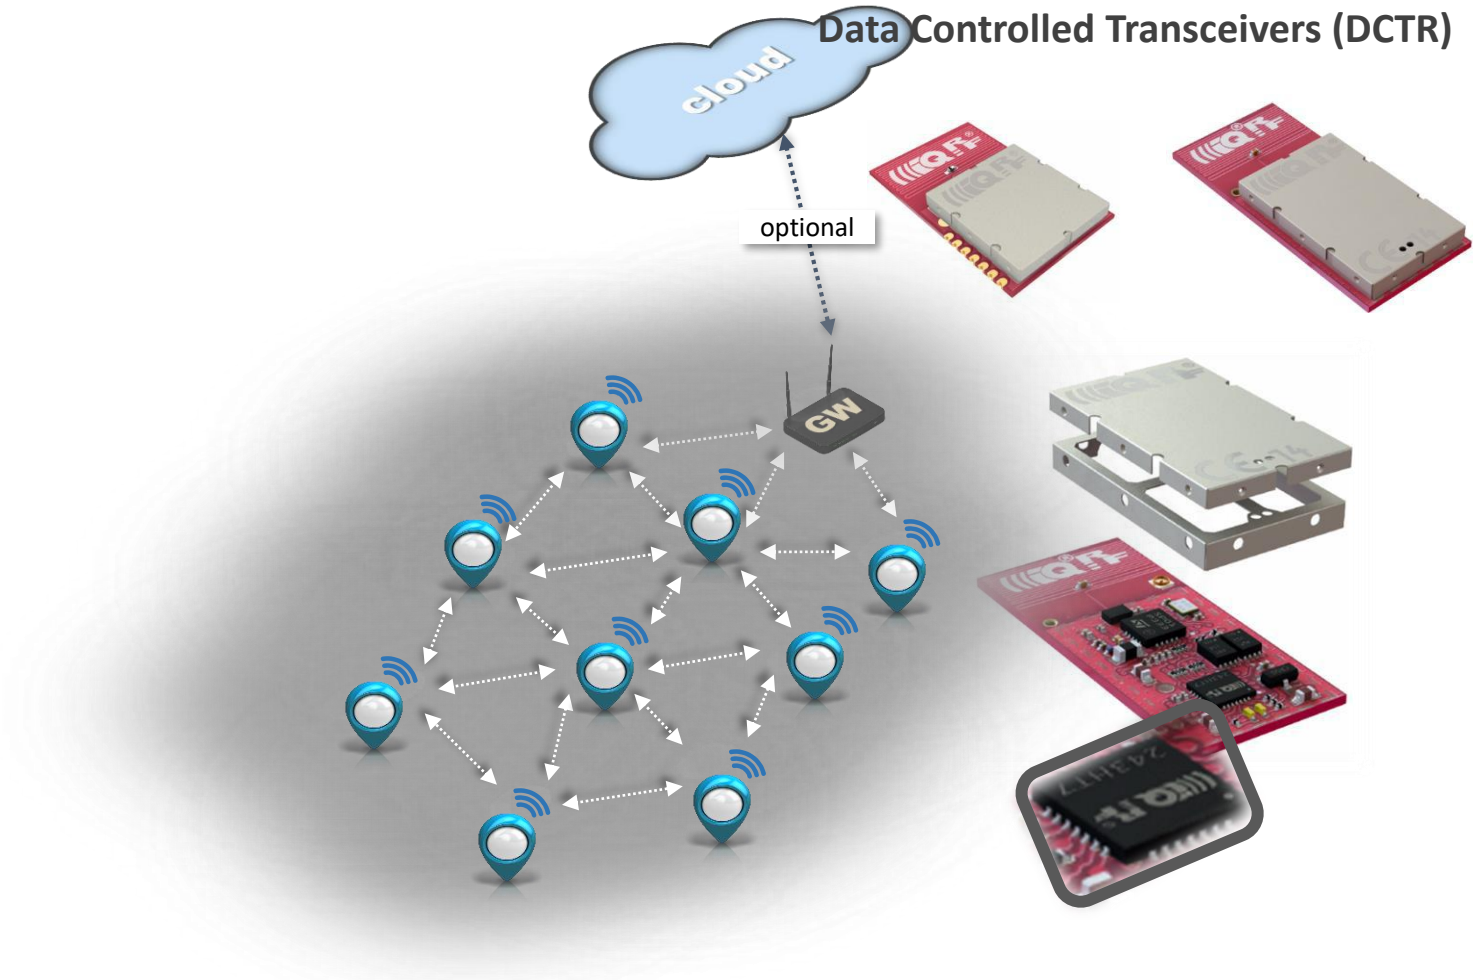

Technical concept

Short recap ...

**Excellent horizontal platform for IoT based on mature wireless mesh technology**

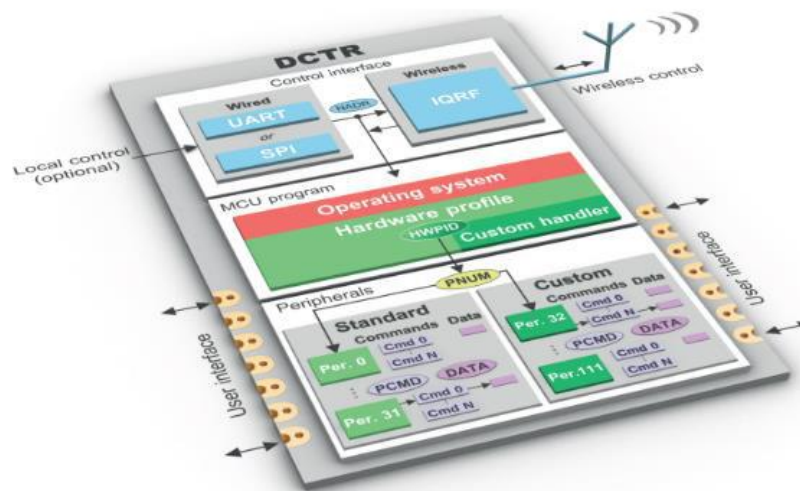

**Excellent horizontal platform for IoT based on mature wireless mesh technology**

Data Controlled Transceiver Module

IQRF® HWPs  
IQRF® OS

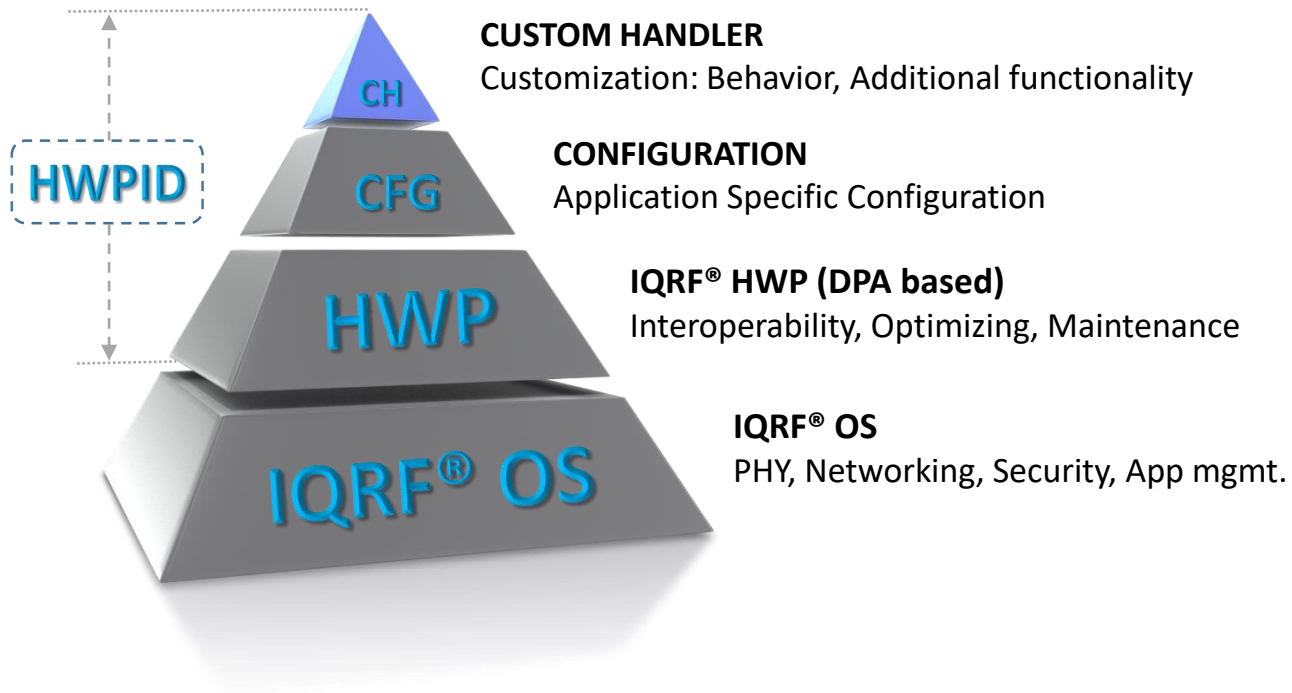

All IQRF® transceivers with IQRF OS 4.01+ will be capable to run HWPs. Without any surcharge.

**Excellent horizontal platform for IoT based on mature wireless mesh technology**

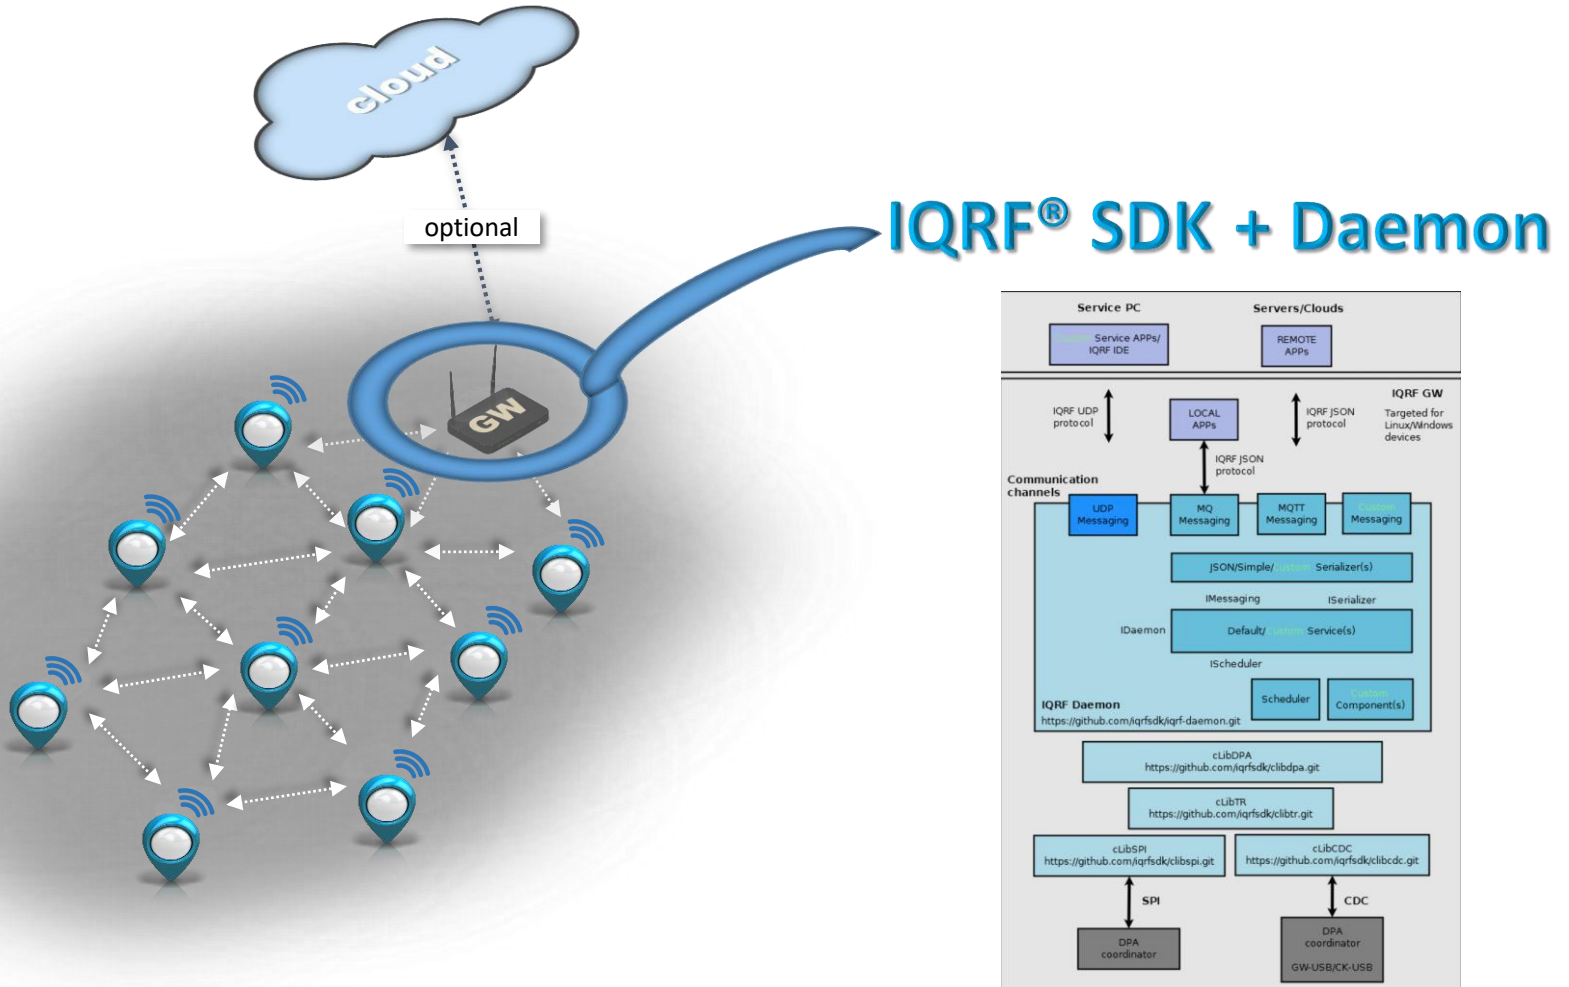

## IQRF<sup>®</sup> Core SW

Excellent horizontal platform for IoT based on mature wireless mesh technology

Excellent horizontal platform for IoT based on mature wireless mesh technology

Technical concept

*Further products  
focus and development*

**Excellent horizontal platform for IoT based on mature wireless mesh technology**

Technical concept

Selected products ...

#### **New modules variants**

Fitting specific needs for volume projects  
TR-7xG scheduled to 2018  
More resources (RAM, FLASH)

#### **IQRF® ASIC**

To support volume projects  
To license transceivers manufacturing  
More info will be released begin of 2018

#### **IQRF® dev. tools**

#### **IQRF® Development tools**

IQRF® IDE  
Anything to accelerate development cycle

**Excellent horizontal platform for IoT based on mature wireless mesh technology**

*Further products  
... and software*

Verticals support

IQRF<sup>®</sup> OS  
IQRF<sup>®</sup> HWPs  
IQRF<sup>®</sup> CH

IQRF<sup>®</sup> Daemon  
+  
interfacing SW

HWP: repeater

Transceivers

Routers

End devices

Accessories

Technical concept

Devices vs. Infrastructure ...

Excellent horizontal platform for IoT based on mature wireless mesh technology

**SENSORS AUTOMATICALLY**  
connect to the IQRF.online service  
provided by operators or created privately

DEVs automatically connect to existing infrastructure  
DEVs are not routing  
DEVs send data asynchronously  
Scheduled LBT-LPTX followed by LPRX  
SECURE communication to IQRF.online service  
END-to-END encryption  
Typical application: online sensor networks  
**Dramatically simplifies DEVs design**

**GW AUTONOMOUS** mode  
enables applications such as building automation

DEVs deploy IQRF.zone infrastructure  
Infrastructure under full end user's control  
SECURE adding all devices to the IQRF.zone is SIMPLE  
DEVs are not routing  
There are dedicated routers  
DEVs may send data asynchronously  
Event based support for a local control  
LPTX/LPRX for devices (STDTX/STDRX for repeaters?)  
SECURE communication inside IQRF.zone  
Very simple DEVs design, standardized repeaters  
Typical application: building automation

*All current options will  
be available ...*

 Smarter Wireless. Simply.

wireless mesh technology for IoT
